

# Emerald<sup>®</sup> Fungicide

## A Better Standard For Dollar Spot Control

**Emerald<sup>®</sup> fungicide** works differently than anything else you've seen used to control dollar spot (it is a different class of fungicide chemistry for dollar spot control). That means **Emerald** can effectively control dollar spot that has developed resistance to other fungicides. When used as directed, **Emerald**:

- Provides unprecedented dollar spot control in virtually every major turf species, and in every region of the United States.
- Controls dollar spot for 14 to 28 days with a single application.
- Delivers better dollar spot control in bentgrass and other dollar spot-susceptible turfgrasses than other fungicides.
- Gives superintendents a true resistance-management tool.
- Utilizes low-use rates and provides strong residual control.

**Use Sites:** Golf course turfgrass to include greens, tees, fairways and other golf turf.

**Formulation:** 70% WG  
(Water Dispersible Granule)

**Packaging:** .49 lb. case

**Active Ingredient:** Boscalid

**Chemical Family:** Anilide (Carboxamide)

**Mode of Action:** Inhibits respiration within the fungal cell. Is at a different site than the strobilurin fungicide chemistries.

**Behavior in Plants:** Upward systemic and limited translaminar movement.

**Rates:** 0.13 to 0.18 oz. / 1000 sq. ft. in 2 to 4 gallons of water / 1000 sq. ft.

**Control Symptoms:** Provides rapid cessation of mycelia growth. Blocks further development of fungal growth at all stages. Healing of turfgrass lesions can be seen within 3+ days.

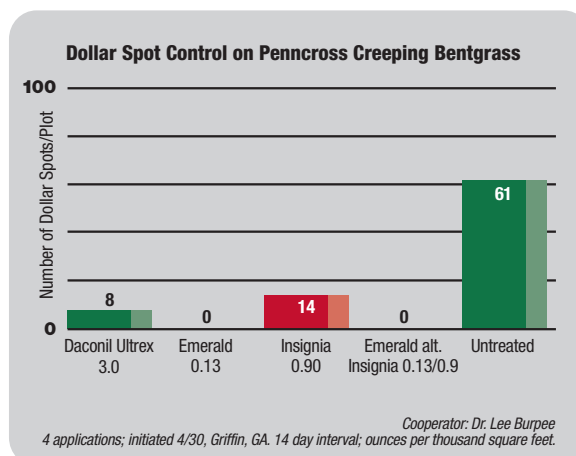

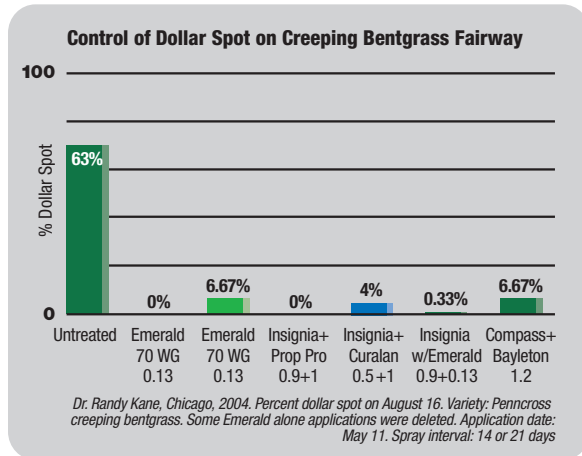

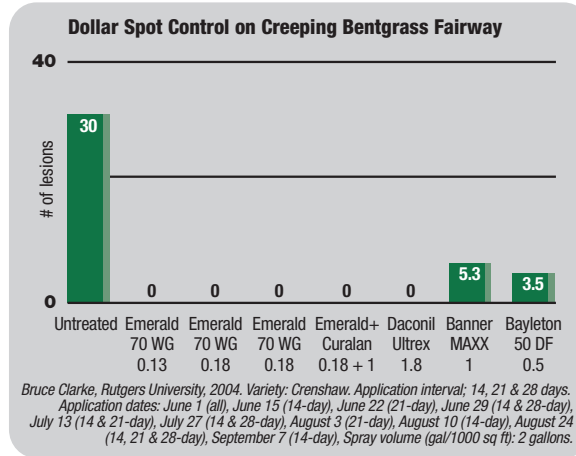

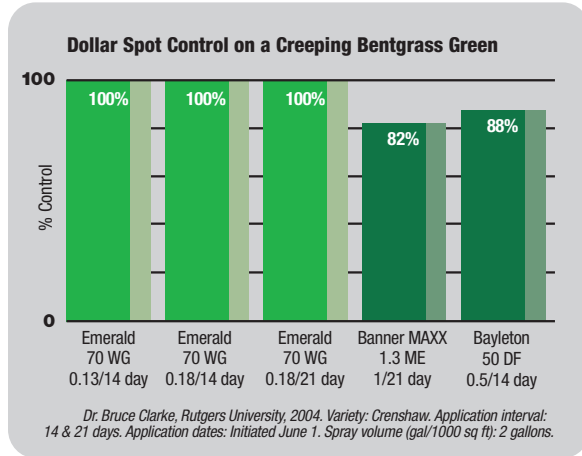

### Where To Use Emerald

Research shows that **Emerald** provides excellent dollar spot control in every region of the country. **Emerald** controls dollar spot in most major turf species, including:

- Creeping Bentgrass
- Colonial Bentgrass
- Perennial Ryegrass
- Annual Ryegrass
- Kentucky Bluegrass
- Common Bermudagrass
- Hybrid Bermudagrass
- Annual Bluegrass
- Seashore Paspalum
- St. Augustinegrass
- Tall Fescue
- Bahiagrass
- Zoysiagrass
- Centipedegrass

### Emerald Gets Results

### Keys to Success

Preventative applications are most effective to achieve greatest benefits of residual control. Use **Insignia® fungicide/Emerald** alternation for extended broad-spectrum control in dollar spot-susceptible turfgrass.

### Suggested Tank Mixes

**Iprodione Pro fungicide, Curalan® fungicide, Propiconazole Pro fungicide** or chlorothalonil.

Always read and follow label directions.
