

Rout®

ORNAMENTAL HERBICIDE

Now this highly effective granular pre-emergent herbicide is even more convenient.

Rout® Ornamental Herbicide features a selective combination of two active ingredients—*Oxyfluorfen* and *Oryzalin*. This granular pre-emergent has been put to great use for decades in nurseries across the country for one basic reason: it works. Now this product delivers the same trusted performance, while the formulation's enhanced carrier virtually eliminates both dust and odor. Confidence and added convenience in a new, nursery-friendly plastic bag—a winning combination to prevent the emergence of some of the most difficult to control broadleaf and grassy weeds.

Advantages:

Control: Creates a weed barrier in the soil that prevents the emergence of grassy and broadleaf weeds; left undisturbed, barrier limits weed seedling development for 60-90+ days, depending on local conditions

Versatility: Can be applied over the top of more than 125 labeled crop plants, including woody ornamentals

Flexibility: Can be applied any time targeted weeds are expected to germinate; should not be applied inside enclosed structures or within 2 weeks of winter cover

Safety: Low risk of phytotoxicity; good crop tolerance when applied as described on label

Weeds Controlled:

More than 30 profit-robbing weeds are listed on the label, including:

- | | |
|-------------|------------------|
| Spurge | Crabgrass |
| Chickweed | Annual Bluegrass |
| Groundsel | Fireweed |
| Oxalis | Pearlwort |
| Bittercress | |

EPA REGISTRATION NO.
58185-27

ACTIVE INGREDIENTS
Oxyfluorfen – 1.0 lb/ 50-lb bag
Oryzalin - 0.5 lb./50-lb bag

CHEMICAL FAMILY
Oxyfluorfen: Diphenylether (Group 14)
Oryzalin: Dinitroaniline (Group 3)

FORMULATION
3G (Granular)

USE SITES
Container, field grown and landscape ornamentals, cut flowers and foliage crops

MODE OF ACTION
Oxyfluorfen: Disrupts formation of cell membranes
Oryzalin: Inhibits microtubule assembly during cell division

APPLICATION RATES
100 lb/acre (2 bags)

RESTRICTED USE
NO

SIGNAL WORD
Caution

PACKAGING
50-lb bag

Rout®

FORMULATION:

Rout® granular herbicide contains the active ingredients Oxyfluorfen and Oryzalin. Each 50-lb bag contains 1.0 lb of Oxyfluorfen and 0.5 lb of Oryzalin.

ALWAYS READ AND FOLLOW LABEL DIRECTIONS BEFORE USING THIS PRODUCT.

MODE OF ACTION:

The active ingredients in Rout interfere with seedling development by disrupting the formation of cell membranes and inhibiting cell division. Rout is most effective applied to soil surfaces that have been settled with irrigation or rainfall. A post application irrigation of approximately 0.5 inches is required to move the active ingredients from the carrier into the growing media or soil. Once watered in and activated, do not disrupt the herbicide barrier or poor weed control may result.

LABELED USES:

Apply Rout for pre-emergent control of more than 30 grass and broadleaf weeds in more than 100 crops growing in the following areas:

- Container and Field Grown Ornamentals
- Christmas Trees
- Landscape Ornamentals
- Cut Flower and Foliage Crops
- Field Grown Proteas
- Saran House Grown Anthuriums
- Dracaena Field Stock

APPLICATION:

Apply Rout as a uniform broadcast on growing media surface at the rate of 100 pounds (2 bags) to the acre. To minimize the risk of crop injury, always apply Rout to crops that are well hydrated, but have dry foliage. Avoid applications when severe weather conditions are expected.

STATE RESTRICTIONS:

- Restricted use in the states of New York and Vermont

Consult with an Everris® Territory Manager or visit www.everris.us.com for more detailed information about the advantages of incorporating Rout 3G into your existing herbicide program.

The information set forth herein is subject to the terms, conditions and limitations set forth on the label. Consult the label before purchase or use.
