

How to Apply: Treating Subsurface Runways

Locate active tunnels

Make a 1 inch hole in the roof of a mole surface tunnel. Do not crush tunnel. Always mark open tunnels. Mark these openings to allow you to revisit later.

Revisit tunnel openings 24-48 hours later. Tunnels that have had holes resealed within 48 hours are an indication of mole activity and a good place to bait.

Place the product in tunnels

Poke a new hole in the roof of the active tunnel just larger than the diameter of the product.

Drop the product down into the hole and reseat with dirt. Repeat the process for every 5 to 10 feet of active tunnel.

Checking the results

Five days after placing the product into the active tunnels, use procedure above to see if tunnel remains active and if so, retreat any tunnels that still appear to be active.
