ACTIVE INGREDIENT:

Triclopyr 2.25 lbs AE
Clopyralid .75 lbs/gal AE

PRODUCT:

Prescott Herbicide

Selective Weed Control

Alligare.com

The premier choice for controlling broadleaf weeds including nearly all thistle and knapweed species in rangeland and permanent grass pastures as well as individual plant and spot treatments.

Alligare. The Leader In Advanced Herbicide Solutions. sm

CATEGORY: Range & Pasture

ACTIVE INGREDIENT: Triclopyr 2.25 lbs AE
Clopyralid .75 lbs/gal AE

PRODUCT:

Prescott Herbicide

Selective Weed Control

Prescott Herbicide Use Sites

- Rangeland and permanent grass pastures
- Non-crop areas including:
 - Fence rows
 - Non-irrigation ditch banks
 - Roadsides
 - Around farm buildings
 - CRP acres

For Best Results:

Prescott Herbicide belongs to the carboxylic acid chemical family of herbicides. Herbicides in this family impact the processes of cell division, cell enlargement, protein synthesis and respiration by disrupting the hormonal balance of target plants. Prescott Herbicide is absorbed through the roots and foliage of plants, causing unregulated growth and ultimately killing target species. For best results, the spray tank solutions of Prescott Herbicide should be maintained at pH 5 to 7. Degradation of Prescott Herbicide may occur if it is used in a spray solution or with spray additives that buffer pH to below 4 or above 8.

For best activity, Prescott Herbicide must be applied when soil temperatures are above 55 degrees F and air temperatures are between 40 and 105 degrees F when plants are actively growing.

Alligare Prescott Herbicide is a broad-spectrum postemergence herbicide for control of broadleaf weeds in rangeland and permanent grass pastures, non-crop areas such as fence rows, non-irrigation ditch banks, roadsides and around farm buildings, and CRP acres. Prescott Herbicide is the premier choice for Individual Plant or Spot Treatment of many noxious and invasive weeds.

- Selective broadleaf control for the release of desirable grass species
- Non-restricted use herbicide
- Flexible tank mix options for location-specific recommendations
- Control of nearly all thistles and knapweed species

Targeted Weeds

Biennial thistles including: bull, milk, musk & plumeless Blackberry Broomweed, annual Burdock Cocklebur Croton Dandelion, common and false Dock, curly Goldenrod Hawkweed Horseweed	Ironweed, Western Knapweed including: diffuse, meadow, Russian & spotted Kudzu Lettuce, prickly Locusts Marshelder Multiflora rose Nightshade Oxeye Daisy Pigweed (suppression)	Poison Ivy Ragweed including: common and western Ragwort, tansy Skeleton, rush Sowthistle, annual and perennial Starthistle, annual Teasel, common Thistle, Canada Tropical soda apple Wormwood, absinth

Mixing Instructions

1. Add 3/4 of the required spray volume to the spray tank and start agitation.
2. Add the required amount of Alligare Prescott Herbicide.
3. Add any surfactants, crop oils, or other adjuvants according to manufacturer's label.
4. Add any spray thickening agent, if needed to control drift, according to the manufacturer's label.
5. Agitate during final filling of the spray tank and maintain sufficient agitation during application to ensure uniformity of the spray mixture.

Note: Allow time for thorough mixing of each spray ingredient before adding the next. If allowed to stand after mixing, agitate spray mixture before use.

Active Ingredient(s):

Triclopyr TEA: 3,5,6-trichloro-2-pyridinyloxyacetic acid, triethylamine salt.....	33.0%
Clopyralid TEA: 3,6-dichloro-2-pyridinecarboxylic acid, triethylamine salt.....	12.1%
OTHER INGREDIENTS:.....	75.6%
TOTAL:.....	100.0%
