

# Blazon® Spray Pattern Indicators for Sports Turf Management

Blazon® Spray Pattern Indicator is the professional choice not only for what it does do, but also for what it doesn't do!

It doesn't stain your fingers blue, because Blazon® is the only SPI on the market that is a 100% non-ionic, polymeric colorant. It is not an acid dye, which is staining by nature and slow to dissipate.

On turf, Blazon® dissipates with sun, dew, and sunlight in hours. On your fingers, it washes off with a little soap and water.

Use Blazon® with pesticides, fertilizers, or plant growth regulator

tank mixes where precise, uniform application is a must.

Use Blazon® to avoid missed areas, identify clogged nozzles, and reduce costly overlapping on turf. Use Blazon® anywhere an indicator is needed and cleanliness is a must.

Blazon® chemistry is inert and pH neutral, completely soluble, and washes off of skin, equipment, and clothing.

Blazon® can also be used to enhance the color of your Sports Turf field, all while promising not to stain the uniforms of the players!
