

# BotaniGard® 22WP

## Small Volume Spray Rates

When mixing BotaniGard in volumes smaller than 100 gallons, use the Small Volume Spray Rate chart below to determine the amount of BotaniGard needed when applying amounts for 25 gallons of spray mix or less.

**Typical application rates per 100 gallons of spray volume:**

Whitefly and aphids     ½ - 1 lb  
 Thrips                         1 - 2 lbs  
 Other labeled insects    ½ - 2 lbs

### Small Volume Spray Rates for BotaniGard® 22WP Mycoinsecticide

| Gallons of water | Rate depends on insect populations |              |              |
|------------------|------------------------------------|--------------|--------------|
|                  | ½ Pound Rate                       | 1 Pound Rate | 2 Pound Rate |
| 1                | 1.5 tsp                            | 1 Tbl        | 2 Tbl        |
| 5                | 2.5 Tbl                            | 5 Tbl        | 10 Tbl       |
| 10               | 5.0 Tbl                            | 10 Tbl       | 20.25 Tbl    |
| 25               | 12.75 Tbl                          | 25 Tbl       | 50.5 Tbl     |

**Application:**

Shake the bottle of BotaniGard 22WP to loosen up the powder for the most accurate measurement. When applying, spray to wet, but avoid run-off.

The scoop that comes inside the BotaniGard 22WP container holds 6 tablespoons when full and leveled off.

**Note:** Use caution when making BotaniGard applications to open blooms, especially on varieties known to be sensitive. It is recommended that a small group of plants be tested for effects on open blooms before making applications to entire plantings.
