Post-Emergent Selective Herbicide

Active Ingredient:

Metsulfuron Methyl

PROFILE

Manor is a highly selective premium post-emergent herbicide for effective control of grassy and broadleaf weeds in turfgrass.

ADVANTAGE

Manor is specially formulated to control annual and perennial weedy grasses such as Ryegrass, Bahiagrass and Foxtail and also provide effective control of broadleaf weeds such as Clover and Dollarweed.

MANOR FEATURES AND BENEFITS

- Unequaled turf safety for St. Augustine and Bermuda grasses
- Excellent control for perennial weedy grasses such as Ryegrass, Bahiagrass and Foxtail
- Proven performance for controlling Dollarweed
- At lower rates, ideal for Ryegrass removal during Bermudagrass transition
- Removes Bahiagrass from Centipede, Bermuda grass and St. Augustine

MANOR PRIMARY USE

- Golf Courses
 - Tees
 - Fairways
 - Aprons
 - Roughs
- Sod Farms
- Lawns
- Parks
- Cemeteries
- Non-Crop Areas

MODE OF ACTION

The active ingredient for Manor, Metsulfuron Methyl, is absorbed through the plant's surface and roots to inhibit the production of key amino acids. This action prevents cell division and stops weed growth.
